Case Studies:

We conclude this chapter with this case studies interval graph and Markov chains.

Interval Graph:

It is used extensively in studies order. In such graph, the corner corresponds pairs of object and overlap in same way. Although interval graph 1st arise in a genetic content they have also been used in area such that archeology.

Archeology:

At the end of 19th, Archeology was interested in the various types of pottery and other facts that have been found in Egypt.

particularly, Sir Patrick used the
 data from nine hundred graves in
 the countries. This process is known
 as sequence dating.

pottery found by
 Sir Patrick.

In dating the graph, they are assume
 that if two different artefacts
 occurred together in the same
 grave then their time period must
 have overlapped.

Example:

Artefact a and b occurred
 together caused to in the same
 grave a and b not. we can regard
 such an matrix as the adjacency
 matrix of graph.

a b c d e f

a	-	✓	x	x	x	x
b	✓	*	✓	✓	✓	x
c	x	✓	-	✓	✓	x
d	x	-	✓	x	✓	x
e	✓	*	x	✓	*	x
f	x	x	x	x	✓	-

a b c d e f

a	0	1	0	0	0	0
b	1	0	1	1	1	0
c	0	1	0	0	0	0
d	0	1	0	1	0	0
e	0	1	1	0	1	0
f	0	0	0	0	1	0

DATE: _____

DAY: _____

Any graph that gives information in chronological form to this we construct a set of interval on the real time corresponding to the period during any graph

$$a : (-400, -360)$$

$$b : (-380, -320)$$

$$c : (-360, -300)$$

$$d : (-340, -320)$$

$$e : (-340, -260)$$

$$f : (-280, -240)$$

Genetic:

For some time genetic have reorganized the genetic chromosome as a linear arrangement of genes, and it is natural to ask whether the fine structural inside the genetic problem called Benzer's Problem and so, one to study change in the structure of the whole gene known as mutations.

Markov Chains:

The study of Markov chain has arisen in wide variety of areas from genetics and statistics to computing and sociology for case of presentation.

Let us suppose P_{ij} be probability that it to E_j in one unit of example $P_{11} = 3 - \frac{1}{3}$ and $P_{24} = 0$.

$$P = \begin{bmatrix} 1 & 0 & 0 & 0 & 0 & 0 \\ 0 & \frac{1}{2} & \frac{1}{3} & 0 & 0 & 0 \\ 0 & 0 & \frac{1}{2} & \frac{1}{6} & \frac{1}{3} & 0 \\ 0 & 0 & 0 & 0 & \frac{1}{6} & \frac{1}{3} \\ 0 & 0 & 0 & 0 & 0 & 1 \end{bmatrix}$$
